IR tracking kit		This is an excellent complete kit for IR tracking. It can be mounted hanging from a stage, and the variable lens lets you adjust as needed. The camera is great, and can do colour. it is low latency and a POE machine vision camera (so 1 cable gets you control and the image input). The IR pass filter will block all visible light so you wont end up tracking any projected video the camera can see. It comes with a few IR LED flods and spots. Individual items are listed below, I would prefer not to break them up unless I have to. Price is for the kit or totals by each item.	Image 1 Image 2	\$800.00
